

# Communications - S800 I/O Communication interfaces

## Freelance hardware selector

The S800 I/O family is a highly flexible and modular process I/O system that communicates with parent controllers and PLCs over industry standard Fieldbus technology, permitting a virtually infinite number of installation and communication arrangements for any application:

- Small to large
- Step-by-step expansion
- Easy mounting on a DIN-rail

Thanks to its broad connectivity it fits a wide range of process controllers and PLCs from ABB and others. By permitting installation in the field, close to sensors and actuators, S800 I/O reduces the installation cost by reducing the cost of cabling. And thanks to features such as “hot swap” of modules, online reconfiguration, and redundancy options, it contributes to keep production – and thereby profits – up.
